Facing the diversified needs of customers and based on the company's own manufacturing experience of advanced springs, We established a seal ring business department in June 2016, which has specially conquered the pan plug sealing projects that many top 500 enterprises need to be localized but have not been successfully localized for many years, we helped them save a large number of costs. After years of development, our seal division is now able to manufacture various kinds of non-standard customized sealing products, such as spring energy storage ring, hole pan plug seal, shaft pan plug seal, end face inward pan plug seal, rotary pan plug seal, PTFE lip framework oil seal, lip type oil seal, grid ring, stern seal, dust seal, AQ seal, high pressure rotary oil seal, retaining ring, guide ring, etc.

Our fluoroplastic seals are all made of high-quality PTFE resin. They all have excellent advantages such as extremely low friction resistance, no crawling phenomenon, good self-lubricating performance, and can still work normally in the absence of lubrication. The chemical and physical properties of the material are very stable, with excellent corrosion resistance and outstanding non stickiness. The working temperature ranges from - 60 °C to +250 °C. At the same time, it has excellent dynamic and static sealing characteristics, good wear resistance and long service life. Products are widely used, especially in high pressure, high temperature, high speed conditions, as well as strong acid, strong alkali, strong corrosion environment, still can maintain good sealing performance.

Product introduction

模具弹簧的特性和优点:

- 弹簧材料:选用高级优质铬钒钢 (50CrVA) 制作,耐疲劳、耐温度、韧性好。
- 材料实体:呈矩形截面园角园边形状,与一般的矩形直角边不同,弹簧在高速运行时可以减少应力集中。
- 强压处理:弹簧做到三次以上强压处理,消除了使用前的应力,不会再发生弹簧变形、缩短断裂现象。
- 喷丸处理:弹簧经过表面强化喷丸处理,其表面组织结实,提高了应力集中的强度,使弹簧疲劳寿命延长。
- 使用寿命:根据模具行程长度决定P1的寿命为一百万次以上,P2为五十万次以上,P3为极限。
- 弹簧使用频率:最高频率达千次/分,现代的模具设计,必须要有高品质的模具弹簧,MSC弹簧能满足您的要求。

正确选择和使用价值观念:

- 弹簧在模具中所占的成本比例极小,但功能极大。为了一只弹簧去节省成本,这将浪费时间和效率,得不偿失。
- 在设计模具时必须事先考虑模具弹簧的负荷、尺寸和安装位置的选择。
- 模具在设计P值受力时,尽量选择中等负荷,避免选择最大负荷值。
- 以设计加工完好的模具,选择弹簧不适宜时,只有重新选择弹簧,不允许磨削弹簧的内外径和两端面。

正确的安装方法:

模具弹簧的安装尤为重要,为达到最佳效果,必须注意两点:

- 弹簧安装在平底孔而无导杆时,孔的深度至少达到弹簧的二圈。
- 弹簧安装有导杆时,导杆长度必须大于弹簧的长度。

Characteristics and advantages of die spring:

- 1) .Spring material: made of high quality chrome vanadium steel (50CrVA), with good fatigue resistance, temperature resistance and toughness.
- 2) .Material entity: it is in the shape of corner and edge of rectangular section, which is different from the general rectangular edge. The spring can reduce the stress concentration at high speed.
- 3) . strong pressure treatment: the spring is forced for more than three times to eliminate the stress before use, and the spring deformation and fracture will not occur again.
- 4) .Shot Peening: after surface strengthening shot peening, the surface structure of the spring is firm, which improves the strength of stress concentration and prolongs the fatigue life of the spring.
- 5) .Service life: according to the die stroke length, the service life of P1 is more than one million times, P2 is more than 50000 times, and P3 is the limit.
- 6) . spring frequency: the highest frequency is 1000 times / min, modern mold design, must have high quality mold spring, MSC spring can meet your requirements.

Values correctly selected and used:

- 1) The cost proportion of spring in the mold is very small, but the function is very large. In order to save the cost of a spring, it will waste time and efficiency.
- 2) The size and load of the die must be considered in the design of the die.
- 3) When designing the p value of the die, the medium load should be selected as far as possible, and the maximum load should be avoided.
- 4) When the spring is not suitable for the designed and processed die, the spring can only be re selected, and the inner and outer diameters and two end faces of the spring are not allowed to be ground.

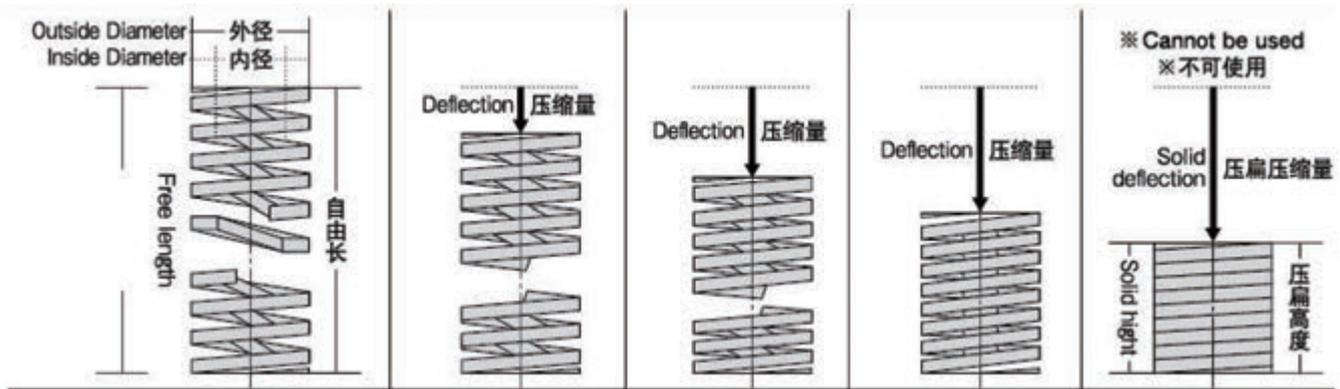

Correct installation method:

- The installation of die spring is particularly important. In order to achieve the best effect, we must pay attention to two points
1. When the spring is installed in a flat bottom hole without a guide rod, the depth of the hole shall reach at least two turns of the spring.
 2. When the spring is installed with a guide rod, the length of the guide rod must be greater than the length of the spring.
